

Challenge:

Global Business Continuity.

THE MISSION CRITICAL CLIENT:

A Michigan-based provider of temporary staffing and human resource solutions with multinational Fortune 500 companies among its clients. Their corporate headquarters serves as the hub of an electronic network linking 26 offices and 700,000 temporary employees worldwide. Continued growth of the company depends on the ability to leverage logistics through their corporate data center, which necessitated an expansion of the existing facility.

THE FIRE PROTECTION OBJECTIVE:

Replace the existing halon fire suppression system and extend waterless fire protection to the expanded data processing and server room areas.

THE FENWAL SOLUTION:

The Fenwal Phoenix™ Fire Suppression System, which utilizes the acclaimed waterless FM-200® agent. The Phoenix system provides fast, automatic, 24/7 protection for sensitive electronic equipment and irreplaceable data resources. The Phoenix system was designed for protection of larger facilities as it allows longer piping runs with under ten second response time. The Phoenix system also offers “drop-in” retrofit for existing halon systems—in most cases, the existing piping can be used. For this client, the Phoenix was the ideal solution as the existing piping was able to be utilized and the coverage was expanded to the new areas with one seamless integrated system.

RESULTS:

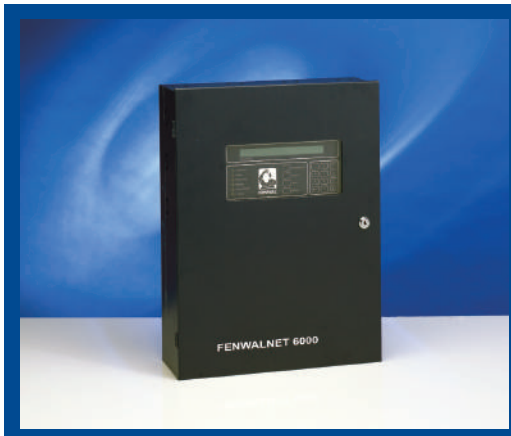

Lower cost. Faster installation. Better 24/7 fire protection.

Everything you need to protect a mission critical facility against fire.

Instant Detection.

Waterless Suppression.

Intelligent Control.

Client Services.
