

Challenge:

Provide an integrated fire protection package that will ensure the electric control room in a satellite office is monitored and protected 24-hours a day.

THE MISSION CRITICAL CLIENT:

A provider of electricity and natural gas to clients throughout the United States, this corporation can generate an approximate 13,000 megawatts of net power and 1.6 billion cubic feet of natural gas per day.

THE FIRE PROTECTION OBJECTIVE:

Provide a completely integrated fire protection package for an electric control room containing Class C hazards in a new satellite office. This corporation is extremely environmentally focused, participating in environmental programs across the United States, so the agent used for this system must fit into the high environmental standards this corporation abides by.

THE FENWAL SOLUTION:

The Fenwal distributor proposed a combination of the Fenwal Engineered System Designed for use with 3M™ Novec™ 1230 Fire Protection Fluid coupled with the FENWALNET[®] 6000 intelligent control unit. Novec 1230 fluid was an ideal agent selection for this application because of its properties, superior performance and leading environmental benefits. Novec 1230 fluid has zero ozone depletion potential, an atmospheric lifetime of just five days, and it is people safe (can be used in occupied spaces). The FENWALNET 6000 panel was the right selection to complete the package. The FENWALNET 6000 provides crossed-zone intelligent smoke detection and notification and suppression system operation if a fire is detected—complete system integration in one panel.

RESULTS:

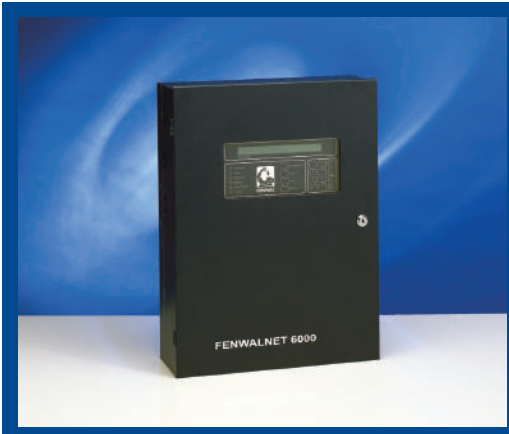

**Integrated system configuration. 24/7 system monitoring and control.
Environmentally friendly suppression agent.**

Everything you need to protect a mission critical facility against fire.

Instant Detection.

Waterless Suppression.

Intelligent Control.

Client Services.
